

Geller Cash Registers

# ML-790 for Retail

ML-790 meets your needs at the retailing point of sale - reliably, sensibly, affordably

ML-790 can operate as a powerful, stand-alone system, with or without scanning, or as part of a sophisticated PC linked stock control system.

#### Some highlights:

- Multi-line colour display screen
- 70,000 product memory
- Management reporting via the Internet
- PC power and performance - cash register price

## Features

### Low cost scanning with bar code learning

A wide range of competitively priced handheld, presentation or flatbed scanners is available. When items not on the system are scanned for the first time, ML-790 'learns' the bar code, requests entry of the price and stores the information for future recognition.

### Your credit card customers are served efficiently

ML-790 is available with integrated chip and PIN providing fast, accurate sales and avoiding time consuming end of day reconciliation work.

### Inter-register communication

Where there are several sales points, ML-790s can link to each other. Information - for example, bar codes or price changes - entered onto one ML-790 are sent automatically to the other ML-790s in the system. In the other direction, sales data from all the ML-790s in the business can be consolidated onto one ML-790 for easy management reporting.

### The multi-line screen makes serving easy

The display screen can be tilted and contrast adjusted to avoid glare and reflection.

### Descriptive customer display

The fully adjustable 2-line alphanumeric customer display shows purchases as they are entered and can be viewed by the customer from the rear or either side. An advertising message can scroll across the display between sales. This display can be integrated within the ML-790 or sited remotely for easy supervision.

### Silent, fast, thermal printing

The heavy-duty 16 digit alphanumeric printer produces 58 mm receipts at a speedy 13 lines per second. Your company logo or special design can print on each receipt. With no ribbon to replace or fade, receipts of the same exceptional clarity are produced every time.

### Scale link for accurate, speedy service of weighed items

ML-790 can operate in conjunction with the Oz scale. Items weighed on the scale are automatically priced and registered on the ML-790.

You can choose to have preset buttons on ML-790's keyboard for weighable items – say, apples. Pressing the 'apples' button displays the different types of apple on the multi-line screen. Cursor to the item being weighed and the price and weight appear in the display and on the receipt and audit roll.

### Multi buy/Mix and match

Items can be discounted when a certain quantity is bought. These items can be entered or scanned in any order and the discount deducted automatically when the correct quantity is reached. Mixed item promotional offers can be created - such as 3 for the price of 2 or buy 1 get 1 free.

### Training Mode

Allows operator training at any time during the working day under manager control.

### Stand-alone scanning with built-in stock control

Where there are simple stock control requirements, ML-790 can be a complete stand-alone system. Ideal for retailers who want the benefits of a scanning system like those used by major retailers but without the cost and sophistication of a PC-based system.

### David Pro Management and Stock Control Software

ML-790's flexibility and power can be considerably increased by linking to David Pro Software on a back-office PC that can be in-house or located remotely.

David Pro designs and prints your keyboard layouts. It controls all aspects of programming and enables you very simply to change prices and product names. David Pro collects and consolidates trading information from all ML-790s in the business (in-house or at remote sites) and presents it in easy-to-read reports for management.

You can enter stock by supplier into David Pro. Stock reduces

as sales are made on the ML-790s. David Pro produces stock reports by supplier, including items that have gone below minimum re-order level and can produce supplier order forms.

### Real time management information via the Internet

If you have broadband, you can access management information from all the ML-790s in your business - in-house or at remote sites - from anywhere in the world. Data from ML-790's electronic journal can be transmitted via the Internet in real time to your home/head office PC. From your PC, you can watch sales being made as they happen on any ML-790 in your business. Internet communication is 2-way so price and product changes can speedily be sent from your home/head office PC to all ML-790s at the points of sale
